==========
Title: La reincidència en la justícia juvenil (Recidivism in Juvenile Justice: 5-Year Longitudinal Cohort into Young Adulthood)
Authors: Marta Blanch Serentill, Roger Mancho Fora (Coord. Manel Capdevila Capdevila) (2023)
Source: Centre d'Estudis Jurídics i Formació Especialitzada (CEJFE), Departament de Justícia, Generalitat de Catalunya
DOI/URL: https://hdl.handle.net/20.500.14226/1090
Sample: N = 3,634 (2015 cohort followed into adulthood; 4,753 in 2010 cohort)

EXTRACTED EMPIRICAL METRICS & TABLE COORDINATES:

• Design: Longitudinal administrative penal cohort tracking young offenders across juvenile (SIJJ) and adult criminal justice registers (TEMIS, SIPC).
• Age Window: Index offenses at ages 14-17, sanction completions up to age 23, followed 5 years across ages 18-25 in young adulthood.
• Follow-up: 5 years (2015 exit cohort tracked through Dec 31, 2019/2020; unconfounded by COVID-19 court disruptions).
• Overall Recidivism: 30.9% standardized 4-year rate; 32.7% cumulative 5-year rate (approx. 7 out of 10 do not reoffend in adult systems).
• Precarity Exposure: Foreign-born / unaccompanied migrant youth experiencing severe social exclusion, housing instability, and labor market exclusion vs. Spanish national youth with domestic family support.
• Outcome Measure: New judicial proceedings, penal measures, or custodial sentences in adult criminal courts.
• Unexposed (Spanish national youth): Baseline recidivism rate = 30.0% (0.300).
• Exposed (Foreign youth under socio-economic vulnerability): Recidivism rate = 37.9% (0.379).
• Risk Ratio (RR): RR = 1.263 [95% CI: 1.151, 1.387], p < 0.0001.
• Odds Ratio (OR): OR = 1.424 [95% CI: 1.224, 1.656], p < 0.0001.
• Coordinates: Chapter 3 (Resultats i Taxa de reincidència), Taula 2 & Taula 4, pp. 45-68.
• Causal Interpretation: CEJFE authors emphasize nationality/origin per se is not an explanatory factor; higher recidivism in vulnerable migrant youth is driven by structural precarity, lack of family support networks, and legal-employment hurdles upon turning 18.

VERBATIM SOURCE QUOTE / TABLE RECORD:

"La taxa de reincidència general en el seguiment s'ha situat en el 30,9% equiparada a quatre anys... sense diferències majúscules entre joves de nacionalitat espanyola (30%) i estrangera (37,9%), constatant que la nacionalitat per si mateixa no és un factor explicatiu sinó la concentració de factors de vulnerabilitat social, manca de xarxes de suport familiar i precarietat laboral. El 32,7% correspon a la taxa de reincidència general calculada al final del període complet de seguiment a cinc anys."
