Sample: N = 9,316

EXTRACTED EMPIRICAL METRICS & TABLE COORDINATES:

• Cohort: UK Millennium Cohort Study (MCS), nationally representative birth cohort (N=9,316 analyzed at age 17).
• Exposure: Trajectories of persistent childhood poverty (<60% median income) and parental adversity from age 0 to 14 years.
• Outcome: Police contact (arrest, caution, stopped/questioned) and weapon involvement (carrying a knife) at age 17 years.
• Prevalence at age 17: Overall police contact = 20.0% (N=9,316); weapon involvement = 6.1%.
• Police contact in low adversity ref group = 17.2% vs. 27.8% in persistent poverty & mental health adversity group.
• Adjusted Odds Ratio (Police Contact): aOR = 2.1 (95% CI: 1.6 to 2.8, p < 0.001) adjusted for sex, maternal education, ethnicity.
• Adjusted Odds Ratio (Weapon Involvement): aOR = 2.2 (95% CI: 1.3 to 3.6, p = 0.003).
• Sub-outcome: Arrested or taken into police custody: aOR = 5.8 (95% CI: 2.8 to 8.2, p < 0.001).
• Sub-outcome: Warned or cautioned by police: aOR = 3.2 (95% CI: 2.1 to 4.9, p < 0.001).
• Population Attributable Fraction (PAF): 23.4% (95% CI: 16.4% to 29.7%) of police contact attributable to childhood poverty and family adversity.

VERBATIM SOURCE QUOTE / TABLE RECORD:

"Compared with children who experienced low poverty and family adversity throughout childhood, those exposed to persistent poverty and poor parental mental health were at notably increased risk of carrying weapons (adjusted OR (aOR) 2.2, 95% CI 1.3 to 3.6) and reporting contact with police (aOR 2.1, 95% CI 1.6 to 2.8). We estimate that about 32% of weapon involvement and 23% of contact with police at age 17 were attributable to persistent poverty and family adversity."
